Forward and backward scans

Name: _____ Date: _____

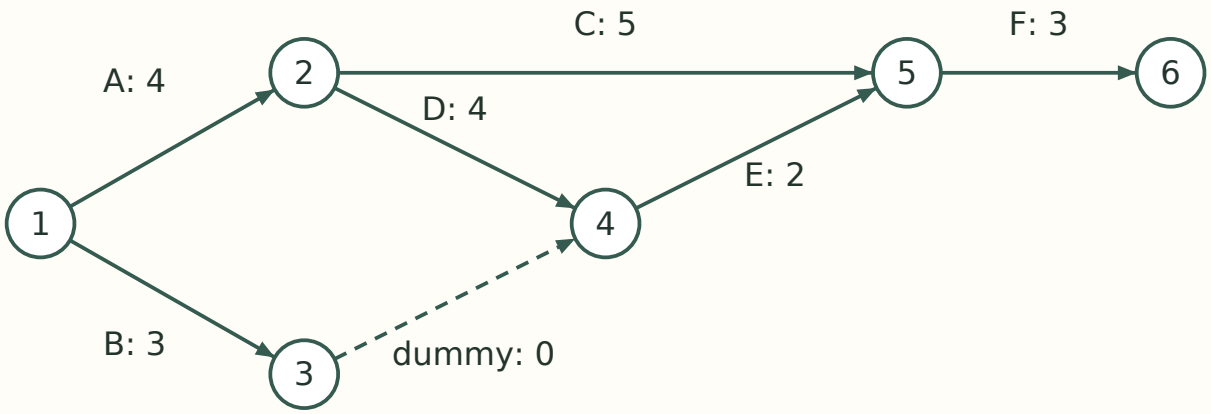

6 questions | 16 marks

1. Perform a complete forward scan on the displayed network. [4 marks]

Activity-on-arrow network; durations are in days.

2. Perform the backward scan for the displayed network using project finish 13. [4 marks]

Activity-on-arrow network; durations are in days.

3. Find the earliest time at a merge when incoming tail times and durations are (2,7), (6,2) and (4,6). [2 marks]

4. Find a latest event time when outgoing head times and durations are (15,4), (19,6) and (14,2). [2 marks]

5. A forward scan gives an event earliest time 9. A claimed backward scan gives latest time 7 for a finish target equal to the earliest project finish. What does this indicate? [2 marks]

6. Why does adding all incoming durations at a merge usually give the wrong earliest time? [2 marks]
