Effects of choices

6 practice questions

1. You have seven dollars and spend three dollars. How much is left?

Seven take away three leaves four.

Answer: 4 dollars.

2. You have four dollars and save two more dollars. What is your new total?

Four and two make six.

Answer: 6 dollars.

3. A goal costs ten dollars. You have eight dollars saved. How much more do you need?

Count from eight to ten: nine, ten.

Answer: 2 dollars.

4. A class has five dollars for pencils. It can reuse a working box and save its two-dollar cost. How much of the five dollars remains for pencils?

No money is spent on the box, so all five dollars remain.

Answer: 5 dollars.

5. You have six dollars. A snack costs two dollars and a book costs five dollars. Can you buy both? Explain.

Two and five make seven, which is one dollar more than six.

Answer: No.

6. A shared fund has four dollars for drawing paper. Sam wants to spend all four dollars on a toy. Explain one effect on the class.

The four dollars can be spent only once. The toy would use the whole amount.

Answer: There would be no money left in this fund for the drawing paper.
