Comparing capacity

6 practice questions

1. In the picture, which container holds less?

Three cupfuls is less than five.

Answer: A.

2. A bowl holds 6 cupfuls. A jar holds 4 of the same cupfuls. Which holds more?

Six is more than four when the cup size is the same.

Answer: The bowl.

3. Is an empty bucket's capacity zero?

The bucket can still hold liquid even when it is empty.

Answer: No.

4. Jo uses a tiny cup and Lee uses a big cup. Are their cup counts fair to compare?

They used different-sized units.

Answer: No.

5. You pour a full cup into an empty jug. The jug has room left. Which holds more?

It holds the cupful and could hold more.

Answer: The jug.

6. Explain one safe way to find which of two containers holds more.

Use equal full cupfuls and avoid spills.

Answer: Use the same small cup to fill each one and compare the counts, with adult help and a tray.
